StepCert

STEP-BY-STEP GUIDES · LMS COURSES · PROOF OF COMPETENCE

Show them once. Prove they can do it.

StepCert records a task in your web browser once and turns it into an illustrated how-to guide in every format your organisation uses, and into a course for your LMS where people do the task themselves and earn a certificate.

The editor: three fields of a form merged into one numbered picture. The name and email typed while recording already read as example data.

Record once

Use your web app as you normally would. Every click becomes a written step with a screenshot and the target highlighted.

Polish it fast

Merge a form into one numbered picture, zoom in on small controls, reorder and reword. Every change can be undone.

Share anywhere

Word, PDF, PowerPoint, web page, video guide, Markdown, JSON and animations, all with your logo and colours.

Prove competence

SCORM, xAPI and cmi5 courses where learners do the task from memory and earn a certificate your LMS records.

Hand it on

One editable .walk file: a colleague opens it, records the part only they know, and rebuilds the course.

Private by design

Recordings stay on your computer. Personal details become example data as you record. No cloud, no upload, no AI service.

Try the live demo

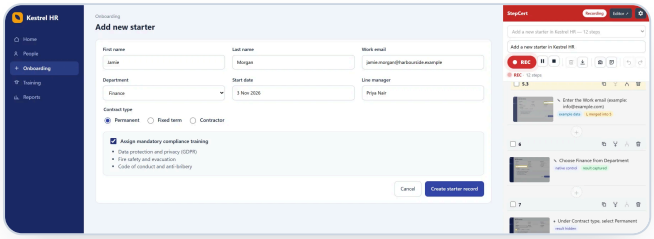

Play the course in a simulated LMS, watch the video and open every document made from one recording: stepcert.com/#try

HOW IT WORKS

From one recording to a guide, a course and a certificate

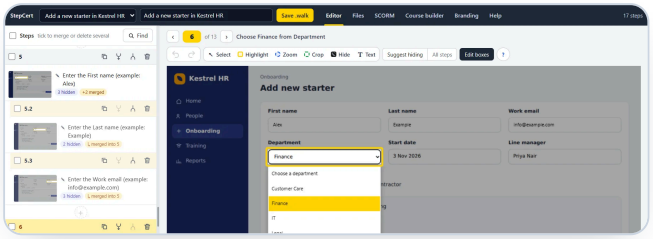

1 Record

Press **REC** and do the task. Each click, choice or typed value becomes a step with a screenshot and a sentence such as “Choose **Finance** from **Department**”. Passwords and card numbers are never recorded.

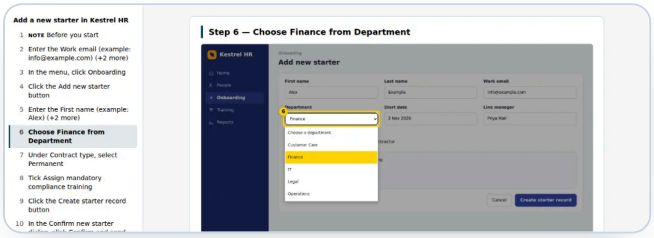

2 Tidy up

Merge the clicks that belong together, point at exactly the right thing, hide anything private and add steps from desktop apps. Dropdown lists a screenshot can't see are drawn back in.

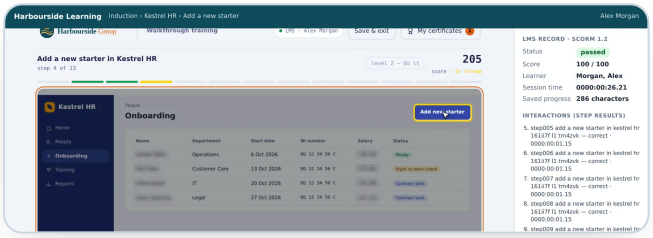

3 Share it

Export the same steps as a document, a deck, a web page with a step list, or a video guide. Your logo and colours go on all of them; export again whenever a step changes.

4 Train and certify

Build a SCORM, xAPI or cmi5 package and upload it to your LMS. Learners practise at three levels and earn a certificate; your LMS records the result and every step.

CERTIFIED PROOF OF COMPETENCE

Watch

The whole walkthrough, at several speeds or step by step.

Level 1: Spot it Recognition

Instructions hidden: learners click each target from memory.

Level 2: Do it Execution

They also type the values and choose the options. Misses and hints cost points.

Level 3: Nail it Mastery

Every missed step is practised again until it's right first time. A clean run earns a Certificate of Mastery.

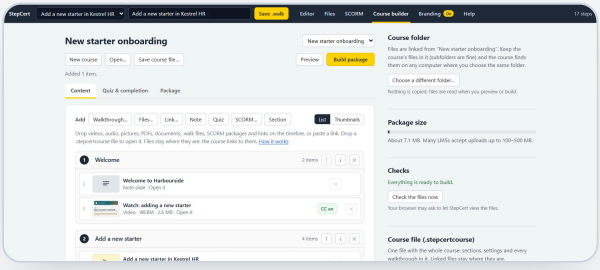

WHAT YOUR LMS RECEIVES

- ☑ Completion, score and pass or fail, using your pass mark
- ☑ Optionally every step: right first time or not, clicks, hints and time
- ☑ A certificate with the learner's name, locked to their LMS account
- ☑ SCORM 1.2, SCORM 2004 (2nd, 3rd and 4th Edition), xAPI and cmi5
- ☑ A fixed course ID, so an updated package keeps learner records

THE COURSE BUILDER

Whole courses, not just one task

Put several walkthroughs on one timeline with videos, recordings, PDFs, documents, links, note slides and quizzes, and bring in the SCORM 1.2 and 2004 packages you already have. Choose what “done” means from six templates and build one package: learners get a course menu, their progress and a certificate, and your LMS gets one result.

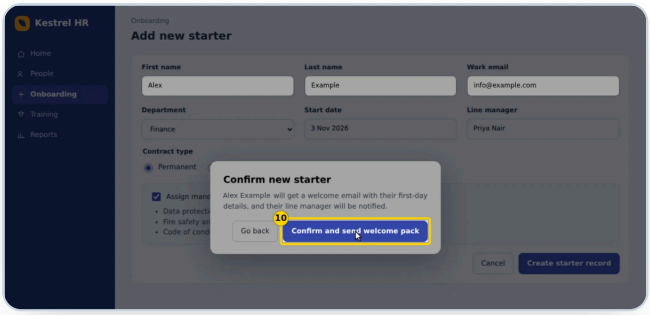

Every format from one recording: Word, PDF, PowerPoint, an offline web page with a step list, Markdown and JSON · MP4 or WebM video, a video guide, animated PNG and WebP · the editable .walk file to hand on, and a settings template so the whole team works the same way.

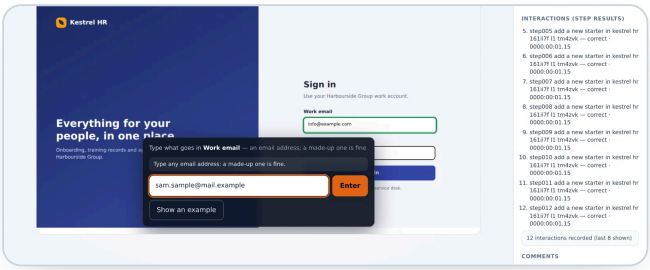

PRIVATE BY DESIGN, BUILT FOR COMPLIANCE

Real people's details never reach your guides

- [x] **No upload, no third-party cloud.** Recordings and screenshots stay in the browser on your computer; the extension sends us only what it needs to check your licence.
- [x] **Personal details become example data as you record.** Names, emails, phone and card numbers, bank details, dates of birth and ID numbers for every EU country, Iceland, Norway, Switzerland, the UK and the US read as **Alex Example** or **info@example.com**, in the text and the pictures.
- [x] **The originals stay with you,** so an author can put one back if it wasn't personal. They never go into a document or a course.
- [x] **Checked before every export.** StepCert lists anything in the text that still looks personal, with its step.
- [x] **Burned in, not layered on.** Every Replace and Hide box is painted into the pictures of documents and courses.
- [x] **No AI service.** Step wording and personal details are worked out on your computer.

From an exported guide: the name typed on the form, and again where it reappeared in the dialog, reads Alex Example.

In the course, a made-up email address counts: learners never type real details, and never a real password.

WHERE IT FITS

Healthcare

A proficiency check in your LMS before staff get live access.

Financial services

A named certificate and step results for training and competence.

Life sciences

One recording for the SOP guide and the course; rebuild both when either changes.

Public sector

Screenshots of official systems stay on the computer they were taken on.

Legal

Client systems stay on the recording computer; hand the .walk file on.

What the rules ask, sector by sector, and the questions your security team will ask: stepcert.com/regulated

One plan with everything in it

For one person, paid yearly: unlimited walkthroughs, exports, courses and learners, every update, and email support. Use it on up to 3 browsers, and offline for up to 7 days. 30-day money-back guarantee.

See the price in your currency: stepcert.com/#pricing

Schools, colleges and organisations

Educational and enterprise users can try StepCert free, and tiered pricing plans bring the price per person down as your team grows. Only people who record and edit need a licence: learners need nothing.
